2254. Design Video Sharing Platform `Premium`

Hard   🏷 Topics   📋   📍 Hint

Solved ●

You have a video sharing platform where users can upload and delete videos. Each `video` is a **string** of digits, where the `iᵗʰ` digit of the string represents the content of the video at minute `i`. For example, the first digit represents the content at minute `0` in the video, the second digit represents the content at minute `1` in the video, and so on. Viewers of videos can also like and dislike videos. Internally, the platform keeps track of the **number of views, likes, and dislikes** on each video.

When a video is uploaded, it is associated with the smallest available integer `videoId` starting from `0`. Once a video is deleted, the `videoId` associated with that video can be reused for another video.

Implement the `VideoSharingPlatform` class:

- `VideoSharingPlatform()` Initializes the object.

- `int upload(String video)` The user uploads a `video`. Return the `videoId` associated with the video.

- `void remove(int videoId)` If there is a video associated with `videoId`, remove the video.

- `String watch(int videoId, int startMinute, int endMinute)` If there is a video associated with `videoId`, increase the number of views on the video by `1` and return the substring of the video string starting at `startMinute` and ending at `min(endMinute, video.length - 1`) (**inclusive**). Otherwise, return `"-1"`.

- `void like(int videoId)` Increases the number of likes on the video associated with `videoId` by `1` if there is a video associated with `videoId`.

- `void dislike(int videoId)` Increases the number of dislikes on the video associated with `videoId` by `1` if there is a video associated with `videoId`.

- `int[] getLikesAndDislikes(int videoId)` Return a **0-indexed** integer array `values` of length `2` where `values[0]` is the number of likes and `values[1]` is the number of dislikes on the video associated with `videoId`. If there is no video associated with `videoId`, return `[-1]`.

- `int getViews(int videoId)` Return the number of views on the video associated with `videoId`, if there is no video associated with `videoId`, return `-1`.

Example 1:

Input
["VideoSharingPlatform", "upload", "upload", "remove", "remove", "upload", "watch", "watch", "like", "dislike", "dislike", "getLikesAndDislikes", "getViews"]
[[], ["123"], ["456"], [4], [0], ["789"], [1, 0, 5], [1, 0, 1], [1], [1], [1], [1], [1]]
Output
[null, 0, 1, null, null, 0, "456", "45", null, null, null, [1, 2], 2]

Explanation
VideoSharingPlatform videoSharingPlatform = new VideoSharingPlatform();
videoSharingPlatform.upload("123");   // The smallest available videoId is 0, so return 0.
videoSharingPlatform.upload("456");   // The smallest available `videoId` is 1, so return 1.
videoSharingPlatform.remove(4);   // There is no video associated with videoId 4, so do nothing.
videoSharingPlatform.remove(0);   // Remove the video associated with videoId 0.
videoSharingPlatform.upload("789");   // Since the video associated with videoId 0 was deleted,
                                           // 0 is the smallest available `videoId`, so return 0.
videoSharingPlatform.watch(1, 0, 5);   // The video associated with videoId 1 is "456".
                                           // The video from minute 0 to min(5, 3 - 1) = 2 is "456", so return "456".
videoSharingPlatform.watch(1, 0, 1);   // The video associated with videoId 1 is "456".
                                           // The video from minute 0 to min(1, 3 - 1) = 1 is "45", so return "45".
videoSharingPlatform.like(1);   // Increase the number of likes on the video associated with videoId 1.
videoSharingPlatform.dislike(1);   // Increase the number of dislikes on the video associated with videoId 1.
videoSharingPlatform.dislike(1);   // Increase the number of dislikes on the video associated with videoId 1.
videoSharingPlatform.getLikesAndDislikes(1); // There is 1 like and 2 dislikes on the video associated with videoId 1, so return [1, 2].
videoSharingPlatform.getViews(1);   // The video associated with videoId 1 has 2 views, so return 2.

Example 2:

Input
["VideoSharingPlatform", "remove", "watch", "like", "dislike", "getLikesAndDislikes", "getViews"]
[[], [0], [0, 0, 1], [0], [0], [0], [0]]
Output
[null, null, "-1", null, null, [-1], -1]

Explanation
VideoSharingPlatform videoSharingPlatform = new VideoSharingPlatform();
videoSharingPlatform.remove(0);   // There is no video associated with videoId 0, so do nothing.
videoSharingPlatform.watch(0, 0, 1);   // There is no video associated with videoId 0, so return "-1".
videoSharingPlatform.like(0);   // There is no video associated with videoId 0, so do nothing.
videoSharingPlatform.dislike(0);   // There is no video associated with videoId 0, so do nothing.
videoSharingPlatform.getLikesAndDislikes(0); // There is no video associated with videoId 0, so return [-1].
videoSharingPlatform.getViews(0);   // There is no video associated with videoId 0, so return -1.

Constraints:

- $1 <= video.length <= 10^5$

- The sum of `video.length` over all calls to `upload` does not exceed 10^5

- `video` consists of digits.

- $0 <= videoId <= 10^5$

- $0 <= startMinute < endMinute < 10^5$

- `startMinute < video.length`

- The sum of `endMinute - startMinute` over all calls to `watch` does not exceed 10^5.

- At most 10^5 calls **in total** will be made to all functions.

School Time, Leet Time
$119/yr $179
